

# Reference Guide

## Your investment options

Issued on 6 November 2017

The information in this guide forms part of the Product Disclosure Statement (PDS) for smartMonday DIRECT dated 6 November 2017

### The nuts and bolts of investing

A basic investment principle is that to expect a higher return you should be prepared to take more risk. If you want to reduce your risk, you should be prepared to expect a lower return. Each asset class has its own risk and return characteristics.

- **Shares** represent part ownership of a company. Owning shares can provide both capital growth and income in the form of dividends. Listed shares are traded on stock exchanges and prices can move considerably and frequently over the course of a day. Investments in shares offer the potential for higher returns over the longer term compared to cash, fixed interest or property. Shares are generally considered riskier than most other investment types, and some shares are riskier than others.
- **Property trusts** and managed property funds can invest in commercial, retail, industrial, hotel and residential real estate. Property investments offer returns based on the value of real properties and rental income streams available from tenancy arrangements on those properties. Property trusts can either be listed on a stock exchange or unlisted. Listed trusts tend to have greater liquidity. Returns tend to be cyclical but property trusts offer the potential for higher returns over the longer term than cash and fixed interest.

#### Exchange-traded funds (ETFs)

ETFs offer access to a broad range of asset classes in local and overseas markets, and many aim to track the performance of a specific index such as the S&P/ASX 200 Accumulation Index. ETFs are convenient if you are looking for relatively low-cost, ready-made diversification.

- **Alternative assets** include market-neutral funds, hedge funds, private equity, commodities and infrastructure. Hedge funds may use specialist investment strategies such as short-selling and arbitrage. Infrastructure investments include utilities and other essential services such as motorways, water distribution and oil pipelines. Alternative assets may be useful to diversify a portfolio because the timing and pattern of returns often differs from traditional assets and some alternatives may be relatively stable across economic and investment market cycles. Some alternative investments are unlisted and therefore less liquid than listed investments.
- **Fixed interest** investments are debt securities issued by governments, banks or corporations. They pay interest at specified dates and repay the principal amount at maturity. Fixed interest investments carry the risk that the issuer will not be able to meet their payment commitments. This is known as credit risk, and some issuers such as companies may have a higher risk of default on payment than, for example, the Australian Government. This asset class also carries interest rate risk, which is the risk that interest rates may increase after the fixed interest instrument has been purchased. An increase in interest rates would typically decrease the market value of the portfolio. Conversely, a decrease in interest rates would increase the market value. Over the longer term, returns from fixed interest investments are generally lower than shares and property, but higher than cash.
- **Cash** is typically defined as short-term fixed interest securities with a maturity date of less than one year. Cash investments offer a low risk of capital loss but generally lower returns than most other asset classes. Term deposits are usually classified as cash.

## Diversification

You've probably heard the expression 'Don't put all your eggs in one basket'. It's often used to describe the concept of diversification. For your super, this means spreading your investments across different asset classes, fund managers and investment strategies. The purpose of diversification is to reduce the overall risk of your investment portfolio.

A diversified portfolio typically falls into one of three categories:

- **Growth-oriented**—typically invests mainly in shares and property which are diversified across geographies and industries and are expected to generate higher capital growth over the longer term than defensive assets. The portfolio has a higher risk of capital loss than defensive strategies. It may also provide some income in the form of dividends from shares and rent from property. The portfolio may also contain some alternative assets.
- **Moderate**—invests in a mix of growth-oriented and defensive-oriented strategies aiming to deliver a moderate return with a moderate level of risk.
- **Defensively-oriented**—invests mainly in cash, fixed interest and perhaps some alternative assets and growth assets. The portfolio has a lower risk of capital loss than growth-oriented strategies. Interest payments from fixed interest securities would provide steady income streams.

The fund has a range of managed investment options (ie our pre-mixed and sector options) to help you to diversify your super portfolio.

If you want to be more hands-on with your super or diversify even further, our direct investment option (DIO) gives you direct access to Australian shares, exchange-traded funds (ETFs) and term deposits. See the *Direct investment option* guide on our website [smartMonday.com.au/resources.aspx](http://smartMonday.com.au/resources.aspx).

When building your super portfolio, you may want some advice. You should speak with a financial adviser if you have one, or call us on and we can put you in touch with one.

## Environmental, social and governance factors (ESG) in our investment policy

Generally the trustee doesn't take environmental, social and governance factors into account when selecting the investment options for the fund.

If you want to take a particular 'socially responsible' stance with your super, we offer the Australian Shares – Socially Responsible option. See page 14 for more information.

## Automatic rebalancing

You can choose to have your asset allocation automatically rebalanced every quarter. Your managed investment options will be realigned to your chosen investment strategy as nominated on your application form. Rebalancing will only occur if your investment options are out of balance by more 5% at the date of rebalancing. Rebalancing will occur on the 10th of March, June, September and December.

Please note:

- Automatic rebalancing does not apply to any DIO investments you may hold
- If you change your investment strategy, this will cancel the automatic rebalancing facility unless you tick the opt-in box on the *Switching managed investment options* form at [smartMonday.com.au/resources.aspx](http://smartMonday.com.au/resources.aspx).

## Inflation and how it is measured

Inflation is generally described as the increase in prices over time. The most common measure of inflation is the rate of change in the Consumer Price Index (CPI)\* which is published by the Australian Bureau of Statistics (ABS). The CPI measures quarterly changes in the price of a 'basket' of goods and services which account for a high proportion of general household expenses (eg groceries, clothing, transport, and housing expenses).

The pre-mixed investment options described in this guide aim to provide investment returns exceeding their inflation-based targets.

\* We use the Consumer Price Index (All Groups) for the eight capital cities (ABS 6401.0)

## Different investment styles

Our range of managed investment options consists of both index and active management styles. The exchange-traded funds (ETFs) currently available on the DIO menu are index-tracking funds.

Index fund managers aim to track the risk and return characteristics of a benchmark index. For example, our International Shares – Index option is designed to closely match the performance of the MSCI World (ex-Australia) Index. Index managers typically charge less than active managers.

Other fund managers seek to use research and their portfolio construction process to outperform a specific market index or to meet an investment objective. There is a risk, especially over shorter periods, that such managers may underperform the relevant market index.

Fund managers seeking to offer greater performance than index managers typically charge more as they incur higher costs. From an investor's perspective, the higher fees are compensated by the expectation of performance better than the market index.

## Standard risk measure

To assist you in choosing how to invest your money the trustee uses APRA's standard risk measure to rate the level of risk for each of our managed investment options.\* You can use these risk ratings to compare investment options, both within the fund and across other super funds. There are seven risk bands:

Risk band	Risk label	Estimated number of negative returns over any 20 year period
1	Very low	Less than 0.5
2	Low	0.5 to less than 1
3	Low to medium	1 to less than 2
4	Medium	2 to less than 3
5	Medium to high	3 to less than 4
6	High	4 to less than 6
7	Very high	6 or greater

The standard risk measure doesn't take into account all forms of investment risk. For example it doesn't consider what the size of a negative return could be, or the likelihood of a positive return being less than what you may require to meet your personal objectives. Nor does it take into account the impact of administration fees and tax on the likelihood of a negative return.

We review the standard risk measure for each of our managed investment options at least annually.

\* Standard risk measure does not apply to the direct investments offered in DIO.

The standard risk measure is only a guide. You should consider whether you're comfortable with the risks and potential losses associated with the investments you choose.

## Our unit pricing policy

We have adopted a formal unit pricing policy for the managed investment options in the fund. We can change this policy and any underlying procedures at any time.

The calculation of the unit price for each option is:

$$\frac{\text{Net asset value* (of the relevant option)}}{\text{The number of units on issue to members in that option}}$$

\* Net asset value is equal to the gross asset value (ie market value of the underlying investments and cash at bank for that investment option) as at the close of business on a given day, plus accrued income minus indirect expense recoveries minus investment income tax provisions.

We reserve the right to suspend unit pricing or transaction processing activities in exceptional circumstances (for example, under situations of extremely volatile market conditions, or when large cash flows are moving into or out of the fund). Our unit pricing policy conforms to industry standards.

### Application of unit prices

Unit prices are derived and applied in an equitable manner that values members' benefits and distributes investment earnings and losses fairly. We apply a 'forward pricing' mechanism to process transactions to and from the fund. This means that all transactions are processed using a unit price calculated after the fund has received the transaction request.

- > **Contributions**—normally processed within 3 to 5 business days of receipt of a contribution and all the necessary information, using the price applicable on the date of processing.
- > **Benefit payments**— normally processed within 3 to 5 business days after all necessary information is received, using the unit price on the day benefit payments are processed.
- > **Investment switches**—we process switches no earlier than the 3 business days after receipt of the completed request and normally within 5 business days, using the unit prices applicable on the date of processing.

Unit prices fluctuate from day to day but in extraordinary market conditions the movements can be significant. Movements can also be significant in smaller investment options relative to size of the cash flows in and out of them. We do not accept liability for any losses you may have suffered as a result of these factors, except where it can be established that we have not applied our unit pricing policy correctly.

# Investment options – summary

- We have a range of investment options to choose from. You can choose a different strategy (or allocation) for your account balance and any future contributions into your account. Only the managed investment options can be used to set up your future contributions strategy.
- Your portfolio allocation may drift away from your chosen strategy over time because of market movements and transactions. If you select the automatic rebalancing feature on the *Application* form, your portfolio of managed investment options will be automatically rebalanced back to your chosen strategy. See page 2 for more information.
- If you don't choose an investment option on your *Application* form, we will invest your money in the Balanced Growth – Index option.
- You can switch between managed investment options online or by sending us a completed *Switching managed investment options* form available on the website. Switches into or out of DIO must be completed online using the DIO portal.

## Important information

- Read the information about the investment options, considering the likely returns, risks, and your investment timeframe, before making a decision.
- The information in this guide may change between the time you read it and when you make a decision. Dashboards containing the latest information on the managed investment options are available at [smartMonday.com.au/investments.aspx](http://smartMonday.com.au/investments.aspx).
- We can change, close or terminate investment options at any time. We'll notify you well in advance if there's anything that we feel will significantly affect your investments in the fund.

Managed investment options (minimum 5% holding in each option)		Direct investment option (DIO)

# Socially responsible investments

The trustee has chosen Crescent Wealth\* as the investment manager for the Australian Shares – Socially Responsible investment option.

## Strategy

The option is invested mostly in shares listed on the Australian Securities Exchange. In selecting shares for the portfolio, Crescent uses ethical screens and considers environmental, social and governance factors as part of a fundamental assessment of value and risk. Examples include a discounted cash flow process to price carbon emissions and strict limits on debt-to-equity ratios.

## Investment process

Crescent Wealth uses negative screens to create an ethical universe and then employs a focused valuation methodology to select attractively priced stocks. Both quantitative and qualitative assessments of risk are critical components of estimating expected returns. Environmental, social and governance risk factors are among the considerations when valuing stocks. The investment process takes account of tax and transactional costs.

The negative screen effectively determines the investment universe. This screen is Shariah-compliant and excludes, for example, investment in companies which:

- > produce alcohol or tobacco
- > manufacture or provide gaming facilities
- > manufacture weapons and armaments
- > produce adult materials
- > are highly leveraged (eg banks, infrastructure, property trusts).

Dividends derived from incidental activities (of companies held in the portfolio) that are deemed to be non-ethical are donated to charity.

In the Australian universe, ethical screens result in a bias towards small cap stocks and resource companies.

\* Crescent Wealth Funds Management (Aust) Limited ABN 32 144 560 172 AFSL No 365260 (Crescent Wealth) has consented to the profile above and accepts responsibility for its accuracy.
